Product overview

- Rated voltage: AC230V (AC95-265V), AC/DC24V
- Rated torque: 15Nm
- Running time: about 15s
- Install below 12Nm valves: 2way, 3way ball valve and butterfly valve
- Control signal: 4-20mA, 0-20mA, 0-5V, 1-5V, 0-10V, 2-10V
- Position feedback: 4-20mA, 0-5V, 0-10V
- Power-cut reset: KT, actuator could act after power-cut by setting menu, KEEP or ON or OFF Command
- Alarm Output: Relay Contact
- Position accuracy: ±1% (set by software)
- High performance brushless motor, Overload protection of internal motor
- It can be used 20,000 times*1

Product features

- 0.96” OLED screen, no visual dead angle, highly bright, energy saving and eco-friendly, real time to show valve opening angle and external control command. Enter sleeping state automatically after about 5 minutes, while it could prompt location state and its control command at sleeping time.
- Original valve adjustment mode—free cover-opening and interactive:
  step1: saving “anticlockwise full open position” by using the button to control valve;
  step2: saving “clockwise full close position” by using the button to control valve;
  Thoroughly eliminate the complex and inconvenience caused by mechanical positioning.
- Adopt 16 high-performance microcontrollers, 12 high-precision AD conversion, built-in unique algorithm, thoroughly eliminate mechanical hysteresis, greatly reduce valve position control error.
- Built-in motor control module, motor frequency speed control can realize accurate positioning.
- Adopt non contact positioning, control unit module design and potting processing, guarantee components reliability and greatly improve product service life; Interface use standard connectors, convenient for installment, adjustment and replacement.
- Menu can report real-time failure, including stuck or other reasons which lead actuator fail to realize valve on/off integrally, and output failure warning signal.
- Menu can realize valve control command exchange.
- Menu can switch freely between remote control and local setting, by pressing the button to adjust valve position locally, built in position limit and show limit status.
- Menu can set valve close position deviation to on or off direction, thoroughly eliminate the complex and inconvenience bring by “Normal On/Off mechanical positioning” to local valve adjustment.
- Menu can restore factory default setting.

*1. Test condition: Rated load, test at under 25°C working temperature and 50% humidity, lead the result from 2 times switching cycle, which will be influenced by different load and working environment.
# Technical data

## Electrical data
- **Rated voltage**: AC230V (50/60HZ) AC/DC24V
- **Rated voltage range**: AC95-265V/DC100-300V AC18-26V/DC22-32V
- **Power consumption**: 40W@running 1.6W@holding 36W@running 0.25W@holding
- **Peak current**: 35mA@5ms@AC230V 1500mA@5ms@DC24V 90mA@5ms@AC110V
- **Fuse**: 1A 5A
- **Connecting cable**: 7*0.2mm² cable, voltage withstand AC300V(Length 800mm)
- **Rated torque**: 15Nm@rated voltage

## Functional data
- **Angle of rotation**: 90±2°
- **Max angle of rotation**: 330±5°
- **Manual operation**: ※ Matching hexagon wrench, using at no power
- **Running time**: About 15s (per 90°)
- **Operating frequency**: Continuous running
- **Sound power level**: Max65dB(A)
- **Position indicator**: Mechanical and screen
- **Electricity safety level**: I Type (ground protection) III Type (ground protection)
- **Inflaming retarding level**: V0 UL94 test method
- **Enclosure**: IP67 As Per En60529/GB4208-2008 (all directions)
- **Insulation resistance**: 100MΩ/1000VDC 100MΩ/1000VDC
- **Withstand voltage**: 1500VAC@1Min 500VAC@1Min
- **Medium temperature**: ≤80° can install with actuator directly ※ >80° need to install bracket or heat radiation stand
- **Working environment**: Indoor or outdoor; if exposed to the rain or sunshine, need to install protective device for the actuator
- **Explosion-proof level**: Class I, Div I, Group C&D
- **Ambient temp**: -10°C ~ 80°C (Standard); -20°C ~80°C (Customized)
- **Non-operation temp**: ※ ≤-40°C or ≥80°C
- **Humidity**: 5-95%RH non-condensing
- **Shock resistance**: ≤300m/s²
- **Vibration**: ※ 10 to 55 Hz, 1.5 mm double amplitude
- **Installation notes**: 360°any angle, The need for manual operation or the wiring space
- **Maintenance**: Free maintenance
- **Certification**: Exd II B T6 Gb;Ex tD A21 IP68 T80°C
- **Dimensions (LXWXH)**: See "Dimensions"
- **Connection standard**: ISO5211 F03, F04, F05
- **Output axis specification**: Female octagonal / male square
- **Hole deepness**: ≤15mm(Female octagonal)/6.5mm(Male square)
- **Casting aluminium**: 1.70kg

Wiring diagrams_1

4-20mA-KT/0-20mA-KT

Control instructions - (No Alarm, 7-core):
1. PE is power supply.
2. BU, RD are Control input and feedback output.
   The power supply switch is forbidden to connect the power supply, otherwise it will damage the control module.
3. Make sure voltage practical range, otherwise it will damage the control module.
4. (Rx) is feedback current input. 4-20mA/0-20mA/0-5V/10V/2-10V, input impedance refers to relevant wiring diagram.
5. (Rx) is control current output 4-20mA.
6. Vout=Iout·Rx
   * Rx is recommended to use low TCR resistor.
   * VOUT≤8V ( recommended Vout=5V Rx=250Ω 0.25W).
7. For “4-20mA/0-20mA” control, from “user setting”, user can set no control signal valve to full-open, full-close or keep. For other control(0-20mA, 0-10V, 0-5V), such setting is invalid.
8. When actuator is stuck or other operating failures, output failure signal.
   Contactor loading capacity: 0.1A/DC24V, 50mA/230V.

0-5V-KT/1-5V-KT/0-10V-KT/2-10V-KT

User Manual

Success comes from our persistent pursuit of perfect details. Excellence originates from our persistence of win-win philosophy.
Mounting instructions

Notice:
※ 1. When assembly with valve, it's suggest to use spring washer add flat washer in order to fasten the screw and nut.
※ 2. It's recommend to use 704 silica gel or instant cement instead of anaerobic adhesive and UV glue.
※ 3. Pls keep the actuator housing away from organic solvents, such as: kerosene, butanone, tetrachloromethane etc., or the housing will crack.

Diagram1  UPVC plastic ball valve+bracket assembly
Diagram2  3piece stainless steel ball valve assembly
Diagram3  3piece stainless steel 3way ball valve assembly

Installed valve technical requirements

☐ 1. When installing ball valve, the max torque < 12Nm. If the ball valve is out of operation for a long time, and the torque value of first on or off is the max torque. Or you can choose ball valve with elastic sealing.

☐ 2. When installing butterfly valve, the max torque < 12Nm. Because the torque value will increased by 10-20% after installing.

☐ 3. When installing direct mount model valve, the hole deep < 15mm. It requires cutting if the output shaft is longer than 15mm.

☐ 4. Pls pay attention to the following items if you install the bracket and coupling by yourself:
   ※ The intensity of bracket should meet the using requirements: the bracket twisting extent < 0.2mm in the process of on or off.
   ※ The parallelism of bracket < 0.5mm.
   ※ When processing the shaft hole at both end of the coupling, it is necessary to ensure the accuracy and concentricity. The purpose is to make sure the mechanical hysteresis < 10°, otherwise it will cause the actuator unable to work.

☐ 5. Screw should be installed spring washer + flat washer, and we suggest you daub some glue cement around the screw in case of screw loosening.

☐ 6. After installation, user should switch the valve on and off one time with handle device first. Modifying the valve after make sure it works well.

Success comes from our persistent pursue of perfect details.
Excellence originates from our persistence of win-win philosophy.
Menus operations ---- Manual operation mode

1 Manual operation mode
After factory default setting, actuator could be manual operated by the button. Press K3 button simultaneously, until K3 is flicking on top right corner. After 5s, enter "Manual operation mode".

2 Input password: password=111

Press K2 button to switch single digit/tens digit/hundreds digit, press K3 button once, it will plus 1. when "xxxx=111", press M button to enter next item.

3 Manual operation:
Press K3 button, actuator will rotate in anticlockwise direction, and the screen will show the current angle. The actuator will stop as soon as the button is released. If the angle is bigger than 90° the bottom of the screen will show "Limit" and the actuator will not operate.
Press K2 button, actuator will rotate in clockwise direction, and the screen will show the current angle. The actuator will stop as soon as the button is released. If the angle is less than 0° the bottom of the screen will show "Limit" and the actuator will not operate.
Press M button or without pressing any button for 80s means to exit the current mode, and enter auto control mode.

Menus operations ---- User setting mode

1 User setting mode:
Hold M button, until “M” is flicking on top right corner. After 5s, enter "user setting mode”.

2 Input password: password=333

Press K2 button to switch single digit/tens digit/hundreds digit, press K3 button once, it will plus 1. when "xxxx=333", press M button to enter next setting item.

3 Display Mode:
Set menu language.

4 Control direction setting:
Control direction: Direct acting, Reverse acting. Positive acting: 4mA means valve is totally off, 20mA means valve is totally on. Negative acting: 4mA means valve is totally on, 20mA means valve is totally off.

5 No control command:
When external control signal is missing, valve can be designed to perform on/off keep on.

6 Dead zone setting:
Dead zone setting: main task is to adjust the accuracy and sensitivity, the unit is deviation degree. The bigger the dead zone is, the less accurate and sensitive the valve is. The smaller the dead zone is, the more accurate and sensitive the valve is. But it tends to cause the system oscillation. The range: 0.1-9.9%. The system default is 0.8.

7 Hysteres enable setting:
This setting is the precondition of next setting, only in when setting IsGO_Hyste=YES, the setting parameter of Hystere is valid and applicable.
TCN-02TEX-KT-All Series intelligent modulating actuator usage instructions

8 Hysteres setting:
Only in when last setting is ISO_HystYES, the parameter of Hysteres is valid and applicable. In the case of that has a big separation between valve stem and connection of actuator, to increase the accuracy of the valve open degree, if not exist above question, do not set this parameter.

- UserSET: Hysteres: X.X%
- UserSET: Hysteres: 0.1%
- UserSET: Hysteres: 9.0%

The range: 0.1-9.9%
Default Value: 0.2%

9 Manual operation speed setting:
When user enter into manual operation, the running speed of actuator is decided by this parameter.

- UserSET: Manu_spd: XX%
- UserSET: Manu_spd: 20
- UserSET: Manu_spd: 100

The range: 20-100%
Default Value: 100%

10 Motor break delay setting:
To increase the stability of motor, actuator will brake after a little delay when running into position specified. In general, user no need to set this parameter.

- UserSET: Brk_Delay: XX%
- UserSET: Brk_Delay: 0Ms
- UserSET: Brk_Delay: 95Ms

The range: 0-95Ms
Default Value: 1Ms

11 Maximum running speed setting:
The maximum running speed of motor when running. The running speed of motor will affect the output torque, so if user have no special requirement please do not modify this parameter.

- UserSET: Speed_Max: XX%
- UserSET: Speed_Max: 20%
- UserSET: Speed_Max: 100%

The range: 20-100%
Default Value: 100%

12 Minimum running speed setting:
The minimum running speed of motor when running. The running speed of motor will affect the output torque, so if user have no special requirement please do not modify this parameter.

- UserSET: Speed_Min: XX%
- UserSET: Speed_Min: 20%
- UserSET: Speed_Min: 96%

The range: 20-95%
Default Value: 75%

13 Speed adjustment range setting:
Actuator can calculate the angle of whole-process A1. Actuator will slow running when is almost to specified position, and this slowing process angle is A2. RangeAdj=A2/A1

- UserSET: RangeAdj: XX%
- UserSET: RangeAdj: 0.1%
- UserSET: RangeAdj: 20.0%

The range: 0.1-20.0%
Default Value: 10%

14 Redefine the position of 4mA
Redefine the closing position of valve, that actuator can be used in the situation of other angle.

- UserSET: Pos4mA: XX%
- UserSET: Pos4mA: -50.0% minimum
- UserSET: Pos4mA: 80.0% maximum

The range: -50.0-80.0%
Default Value: 0.0%

15 Redefine the position of 20mA
Redefine the closing position of valve, that actuator can be used in the situation of other angle.

- UserSET: Pos20mA: XX%
- UserSET: Pos20mA: 20.0% minimum
- UserSET: Pos20mA: 220.0% maximum

The range: 20.0-220.0%
Default Value: 100.0%

16 Out_4mA modifying:
If 4mA deviation value of output current is inaccurate, user can adjust it by this item. If the number increases, output current will be bigger, if the number decreases, the output current will be smaller.

- UserSET: Out_4mA: XXX_A
- UserSET: Out_4mA: 000_A minimum
- UserSET: Out_4mA: 481_A maximum

The range: 000-481_A
Default Value: 191_A
Tips: Confirm the value of Out_4mA less than the value of OUT_20mA, otherwise the feedback signal will be wrong.

17 Out_20mA modifying:
If 20mA deviation value of output current is inaccurate, user can adjust it by this item. If the number increases, output current will be bigger, if the number decreases, the output current will be smaller.

- UserSET: Out_20mA: XXX_A
- UserSET: Out_20mA: 191_A minimum
- UserSET: Out_20mA: 1000_A maximum

The range: 191-1000_A
Default Value: 969_A
Tips: Confirm the value of Out_4mA less than the value of OUT_20mA, otherwise the feedback signal will be wrong.

18 Stall Time:
Adjust the actuator testing sensitivity to valve stall. The smaller the value is, the higher the sensitivity is. The bigger the value is, the lower the sensitivity is. The Value should be increased when the actuator rotating speed is set too low.

- UserSET: StallTime: 3X
- UserSET: StallTime: 1X minimum
- UserSET: StallTime: 20X maximum

The range: 1-20X
Default Value: 3X

19 Power down command:
Power down command: means the command actuator operates when the external power supply is cut off (the function will take effect only when there is enough energy-reserving unit inside actuator.

- UserSET: PDAction: KEEP
- UserSET: PDAction: OFF
- UserSET: PDAction: ON

KEEP: keep the status after power down.
ON: operate valve-on after power down.
OFF: operate valve-off after power down.
Default Value: OFF

Working environment

- Indoor and outdoor are both optional.
- You need to install protective device for the actuator if it is exposed to the rain or sunshine.
- Please pay attention to the ambient temp.
- When installing, you need to consider the reserved space for wiring and repairing.
- When power on, it is not allowed to dismantle actuator and valve.
- When power on, it is not allowed to do wiring.
- Absolutely no falling down the ground, which will hit the device and lead to improper operation.
- Absolutely no standing on the device, which will cause device malfunction or personal accident.
- It is forbidden to do wiring project in rainy day or when there is water splash.

Safety notice

- In order to use the device safely for a long term, please pre-read the manual carefully to ensure correct use.
- Notice item: Please understand the product specification and using method clearly to prevent personal safety danger or device damage.
- In order to indicate damage and danger, here we classify them as “warning” and “notice”.
- Both of contents are very important, which should be obeyed strictly.
- “Warning” : It will cause death or serious injury if not obeyed.
- “Notice” : It will cause slight injury or device damage if not obeyed.
- Subject to technical changes.
